

PRIMARY PRECISION SEEDER BAR

POINT OPTIONS and PART No's

Narrow, inverted Tee points or knife points are available, designed to slip onto the lower tine leg and be held in place with flush-fitting roll pins. Both designs deliver narrow, minimum tillage furrows, preparing the seedbed for optimal and prompt seed germination. Points are precision-cast and hardened for extended wear life.

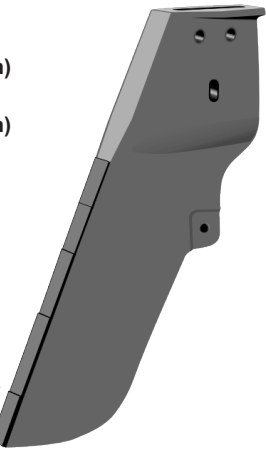

Two length options of Tungsten Carbide protection are available for both winged and knife designs.

P-K-150-3325
(knife point with 150mm tungsten)

P-K-200-3325
(knife point with 200mm tungsten)
